

Hainichlandweg

A dense, shady beech forest lies at the heart of the Wartburg Hainich World Heritage region. Rare animals such as wildcats, bats and woodpeckers live in this varied landscape.

The Hainichlandweg walking trail is 130 km long and offers glorious slopes, fertile meadows and colourful fields, an attraction all year round. A high number of spring-flowering plants, numerous rest areas for summer relaxation, the colours of the autumn leaves and a visit to the many tourist attractions in winter make the Wartburg Hainich World Heritage region a year-round destination. Medieval towns, romantic timbered villages and castles are all waiting to be explored. Railway stations in the surrounding towns ensure good accessibility.

In order to be able to enjoy the unique area while hiking, we recommend to explore the Hainichlandweg on 7 stages.
